## Enigma Autoclaves

Manufactured from the highest quality materials providing many years of trouble free service. All units are supplied with a printer as standard enabling full sterilisation documentation to be retained for future reference. Each cycle on the Enigma autoclaves incorporates a drying phase, operates on a clean water only system totally separating the used and unused water. Using fresh distilled water is strongly recommended. This method dramatically reduces the risk of cross infection of the sterile load by endotoxins that may be present in the used water. The Enigma range is compliant to 93/42 CEE.

**Type N - Non-vacuum autoclave for solid, unwrapped instruments**

**Type S - Vacuum autoclave for wrapped and hollow items**

**Type B - Vacuum autoclave for pouched or hollow instruments, plus porous loads (gowns, drapes)**
